

CL1-GSM Instruction

I .Overview

front view

side elevation

SW button	Control switch state, the state ov-returned after press
SET button	Press the SET button, you can manually mode to set master number
STA Indicator	The current status indicator , if the state is connected , lights , and if status is disconnected, light goes out
GSM SIG Indicator	GSM signal indicator ,flash four secondsto enter the GSM network

II . Options:

1.Insert SIM card

⚠ Installed your SIM card before power on, non-installed SIM card after power on.

2.Plug in the power connector

short initialization time (30seconds)after powe on,related operations after initialization . all controller is disconnected by default.

3.Connecting the GSM net-work

Observe the SIG lights on the panel(Begining one second flash),when flash becomes 4 seconds, the controller has connected GSM net-work,Then you can set and control theGSM controller.

4. Set password

Received the SMS
of the switch status

*GSM controller
initila password
is:0000

*Set password
command format:
"SN+four old
passwords+NEW
+four new
passwords"

*The password
with the power-
down memory
function.

(NEW SN SETOK NEW SN IS ****)

Example : Send SN0000NEW1234

Receive SN SETOK NEW SN IS 1234

5. Set master number(can set up 5 groups)

There are two ways set master number:
one is through SMS settings, one is through
the SET button.

Received
the SMS
of set ok

For example, passwords
is 1234, customers want to

set 13788889999 to be master number, and then
edit the message content: "SN1234SET
13788889999" issued to GSM controller, if you
set successfully will receive a message:
"13788889999SETOK". Only the master numbers
can Dial into the controller and control it. Master
numbers with a power-down memory function.

*Ringing to control

Users control the GSM controller by dial the
number of GSM controller, when get through the
controller state change and hang up after 1 second.
The user may hear "You can not answer the phone
call, beep . . . tone, etc". that set has been
successful. If the controller connected, it will change
to disconnected state after a call. If the original
state is off, call and changed to the connected.

*Button control:

When you press the SW button, controller state
will be overturned. If the original state is connected,
then turned off. If the original into Shutdown mode,
GSM plug into connected.

7. CHECK Order SMS check the controller status: SN+ passwords +CHECK"

(SN****CHECK)

8. Memory function of controller power down

The default function of socket is power down
save. Status can be determined by observing the
STA lights flashing after power on: After power
STA flash two times, which means that the status
is power down save; STA after power flash four
times, which means that the status is without
power down save.

For example: power down status can be
changed by the customer, press SW 12 seconds
after the release, you can change the current
memory status.

9. Reset the system

Press the SET button and SW button at the same
time for 1 second, STA led will slow flash 2 times,
proved successful reset the system. When you
reset the system, the master number will be
emptied, password becomes four zeros: 0000.

Press the SET button, STA1
led will flash for 30 seconds, during
which the number dial controller,
controller will automatically hang up
dial telephone, when the caller number
will become master numbers, numbers
with a power-down memory function.

6. GSM controller control: SMS/Dial/Button

*. SMS (ON Command. OFF Command. T Command)

Setup steps: (the default password for 0000)

1. ON Command
turn the relay state to ON.
SN+password+ON
Example: SN0000ON
Device return: STATE IS ON

2. OFF Command
turn the relay state to OFF
SN+password+OFF.
Example: SN0000OFF
Device return: STATE IS OFF

3. T Command
inching the relay state
SN+password+T+*
(*: 0-9, is inching time. 0 is 0.5 second;
1-9 is 1-9 second).
Example (0.5 second inching): SN0000T0
Example (3 second inching): SN0000T3
Device return: STATE IS INCHING

10. MODE1 is default mode (works in most countries).

When you are in the Nordic Europe or other a few countries
found call works but SMS did not respond, change to MODE0.
e.g. Send SMS: 'SN0000SM0' to equipment, then receive:
'MODE0 SET OK'. When you want to change to MODE1, send
SMS: 'SN0000SM1'

Notes

1、SIM card requirements: global GSM standard
SIM card can be used, currently does not support
3G or CDMA card, please activate the new SIM
before insert the device.

2、Please do not put the controller in the metal
surrounded by the environment (metal box or
distribution box), this will cause the controller signal
become weak, affecting the use of efficiency.
If you need to work in the harsh environment, please
choose to extend the antenna, the antenna placed in
the metal box, can work for long-term stability.

3、Caller ID display must be turned on, ensure SIM
card has sufficient balance in order to call and
send text messages.

4、When the signal is weak in some environment,
there will let SMS controlled insensitive, and this
is normal. Because the message communication
needs transit point forward, it will send to the other
number on time when in a good signal. In such
circumstances, if you want set the master number,
consider to use SET button to set master number
will be more efficient.

5、When the signal of the environment is weak, it will
appear. SMS control is not sensitive, is normal, noneed to
worry. If you set master number, considering fast SET
key to set the key.

6、Using the product should pay attention to moisture, limited
to indoor use. Output power do not work more than
10A(250VAC)/15A(125VAC), inductive load power by half.
